

DEM Issues:

DRP identified 63 DEM tiles (GRID format) with errors within the project Areas and 172 partially covered DEM titles along the boundaries between Project Areas 1 and 2.

Error Types (samples):

DEM Repair Process:

Most of DEM tiles (Grid format) with errors can be fixed using different formats of DEM or DTM data. The model below is one way to resolve these issues. This model basically creates a TIN from DTM data and then converts the TIN into GRID format.
