LAR-IAC's response to the Problem:

Here is a screenshot showing the coverage for Pictometry for Carson. We think it is either 1) A settings issue (not showing all directions or types of images), or 2) The delivery was not complete for some reason. However, for the folders you showed us (properties for number of files in that folder and size) all of them matched up to our number of files (except 065047...which is on the fringe of the area; not in the center of the City).

Let's try a GoToMeeting session next to get to the root of this. Please let us know when you have some time for this.
