# What is Drainage Modeling?

- ▶ Use elevation data to:
  - ▶ Show the drainage network – where runoff flows over land.
  - ▶ Develop catchments

TauDEM 5.1 Quick Start Guide

# Why?

- ▶ MS4 Permit Compliance
- ▶ Catchment Characteristics
- ▶ Infrastructure design
- ▶ Watershed Studies
- ▶ Flood response

Infiltration islands in a parking lot in San Mateo, California, help reduce runoff.

# LA Pilot Area– Characteristics

- ▶ FLAT
- ▶ No streams or ditches
- ▶ Gutter flow
- ▶ 6” curbs often define flow
- ▶ Extensive storm drain network

# Target Deliverables

- ▶ Acceptable Lidar Point Resolution
- ▶ Final Surface Model
- ▶ Artificial Stream Network
- ▶ Catchment area polygons for:
  - Catch Basins (known)
  - Collection Points (theoretical)
  - MS4 Outfalls (regulatory)

# Point Cloud Resolution

Table 1. Point Cloud Resolution/DEM Matrix

DEM	35cm	70cm	1.4m
1ft		n/a	n/a
3ft			n/a
5ft			

\* the default standard for 1ft contour development

# Point Cloud Resolution

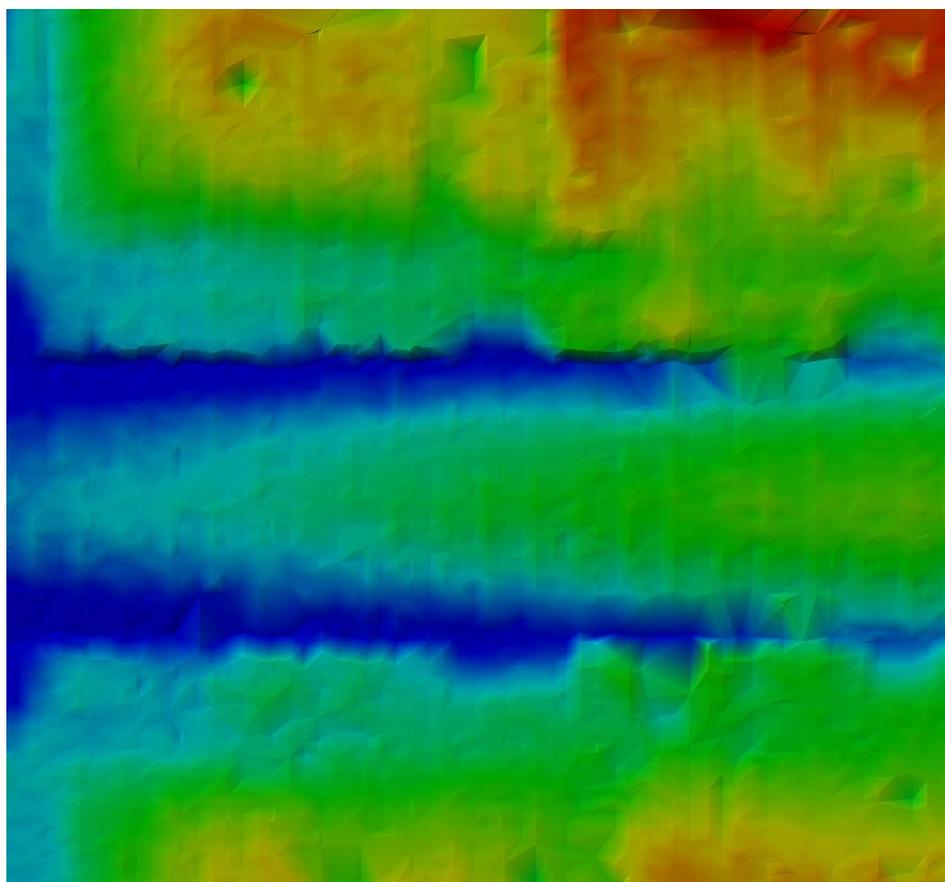

35cm Point spacing

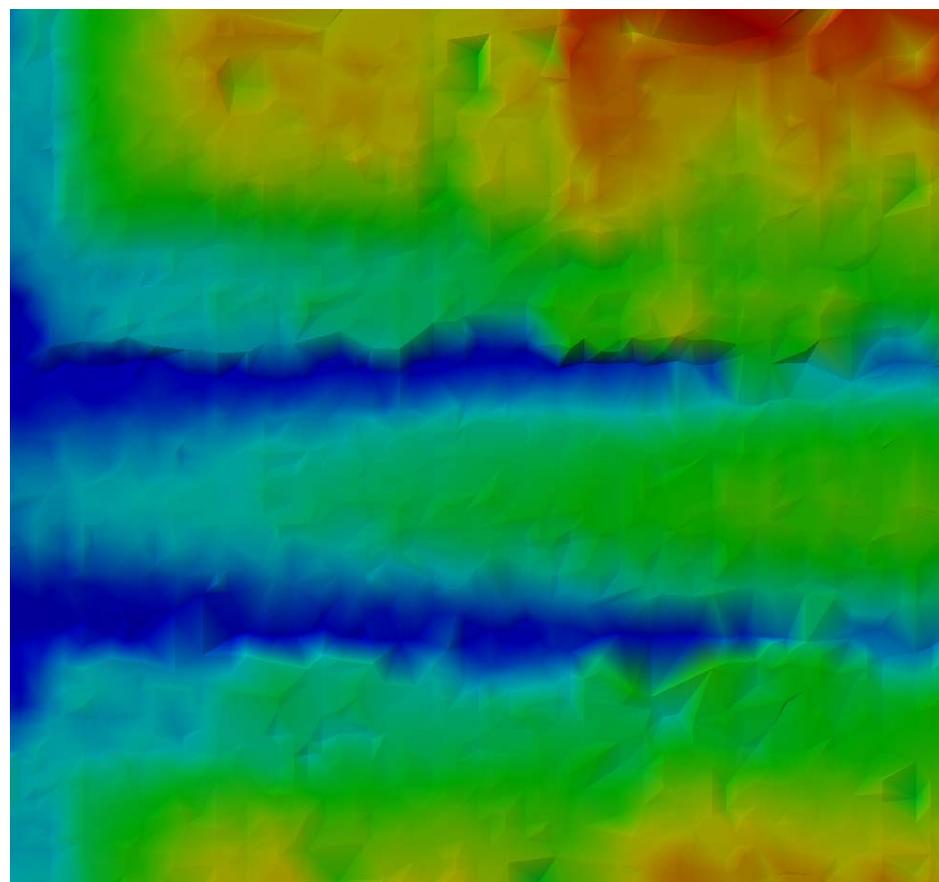

70cm Point spacing

# Point Cloud Resolution

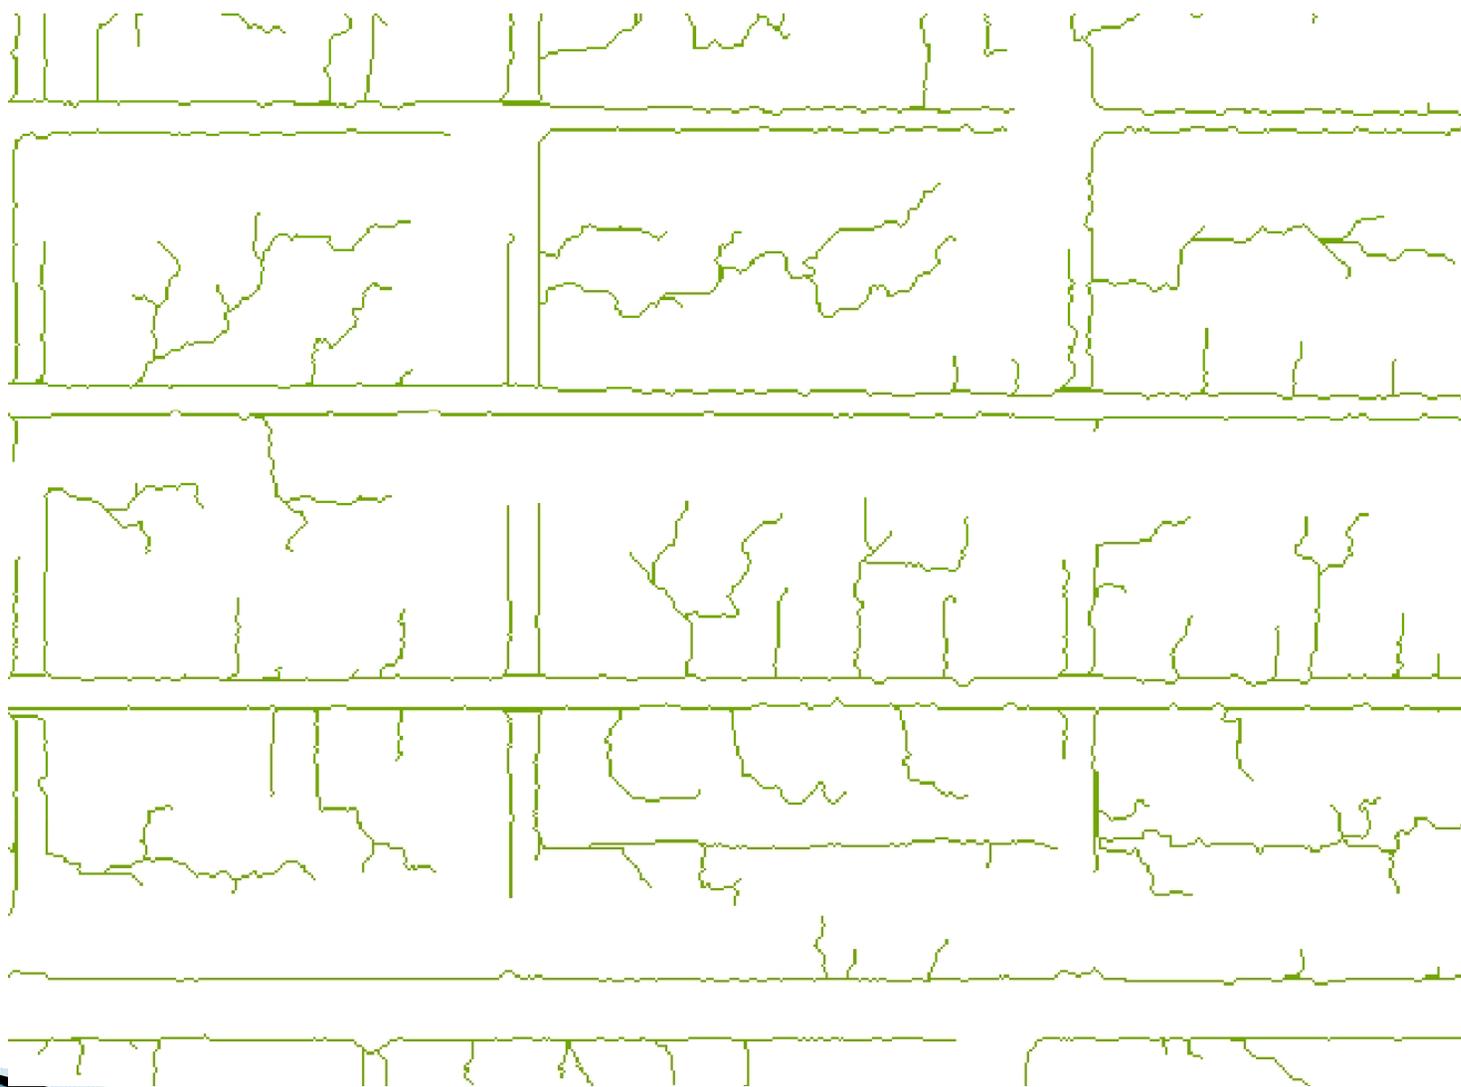

35cm Point spacing

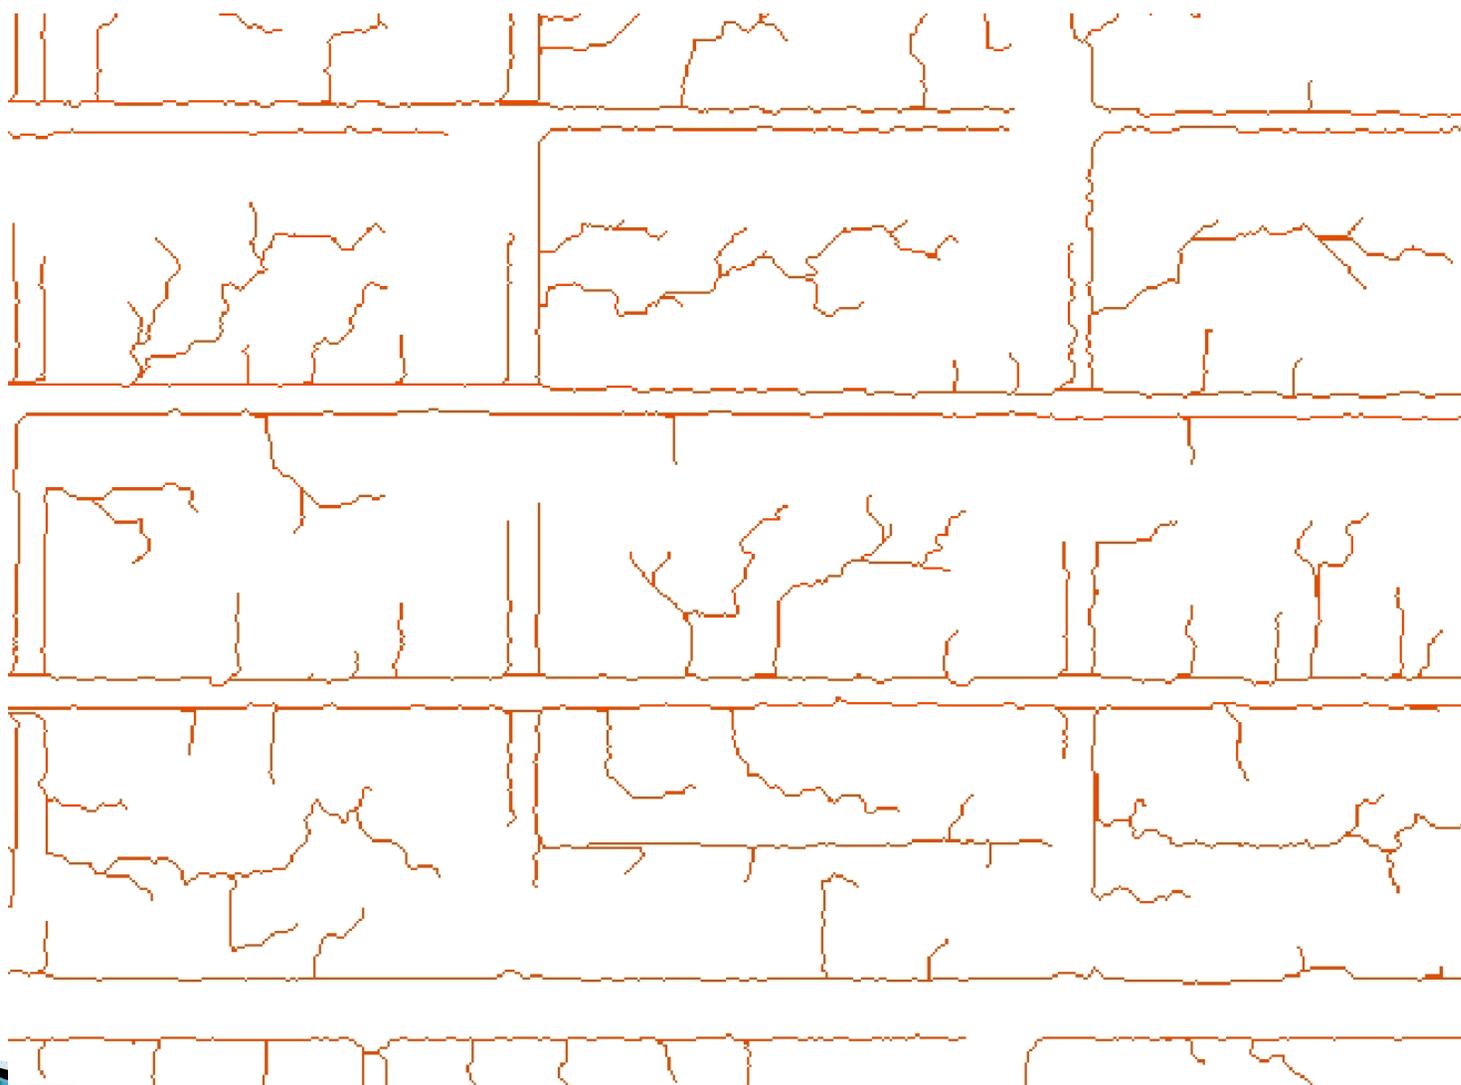

70cm Point spacing

# Point Cloud Resolution

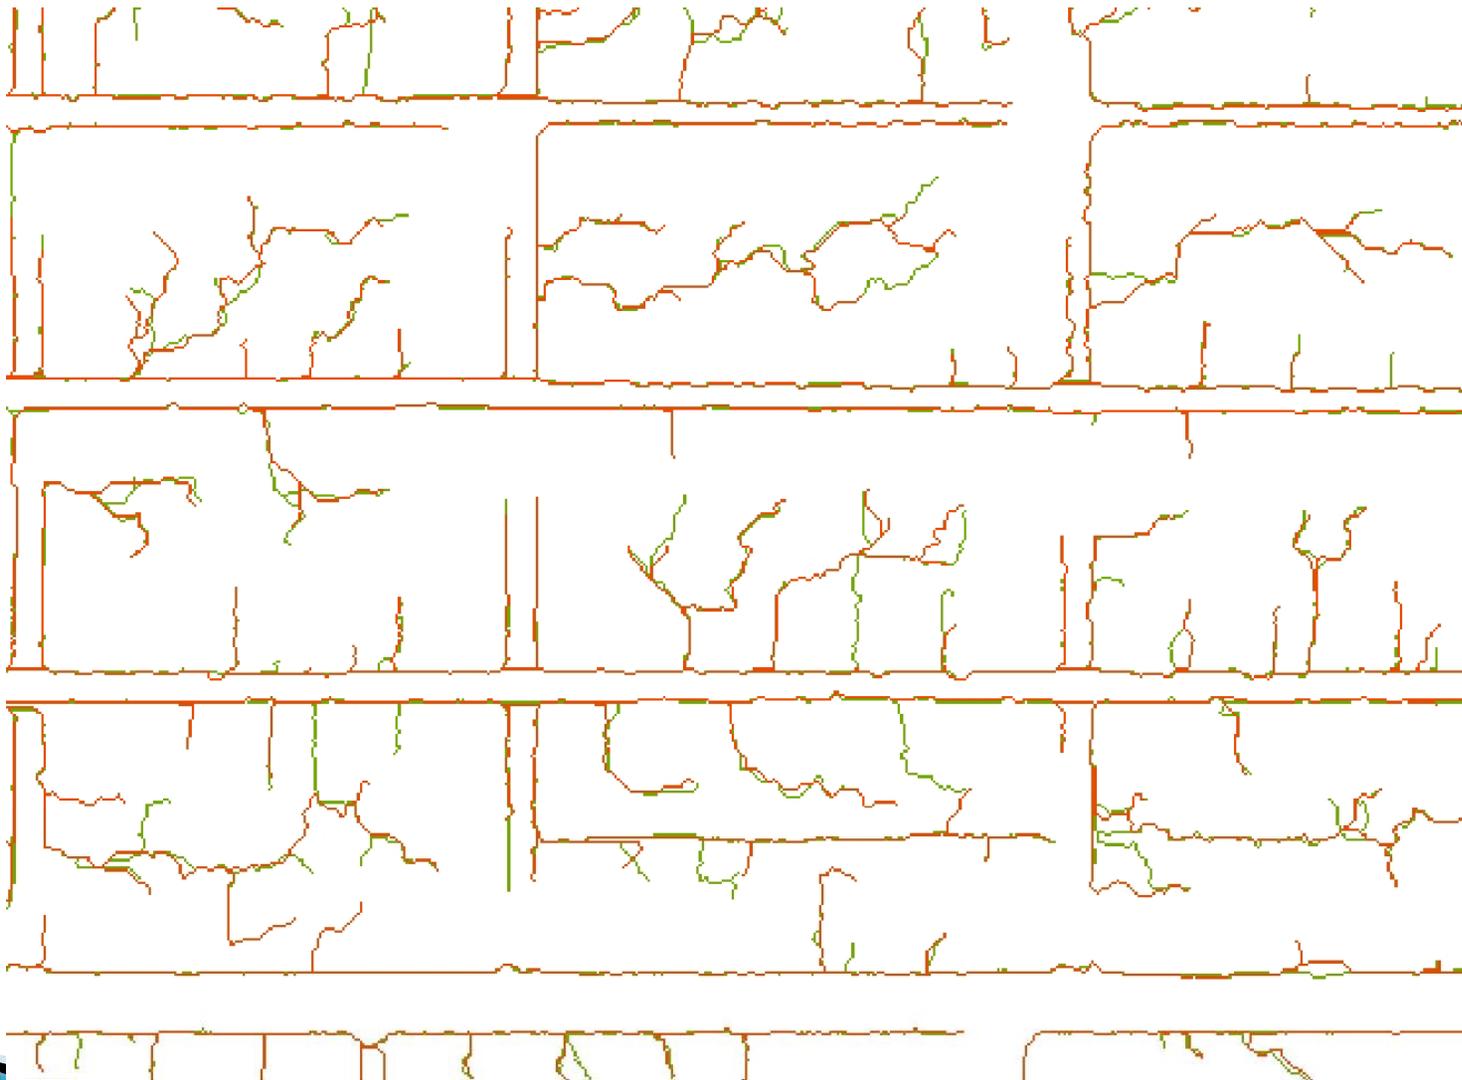

Drainage Network – 35cm post spacing

# Point Cloud Resolution

Drainage Network – 70cm post spacing

# Point Cloud Resolution

Drainage Network – 35cm green  
70cm orange

# Target Deliverables

## Acceptable Lidar Point Resolution

- ▶ Final Surface Model
- ▶ Artificial Stream Network
- ▶ Catchment area polygons
  - Catch Basins (known)
  - Collection Points (theoretical)
  - MS4 Outfalls (regulatory)

## Arc Hydro Overview

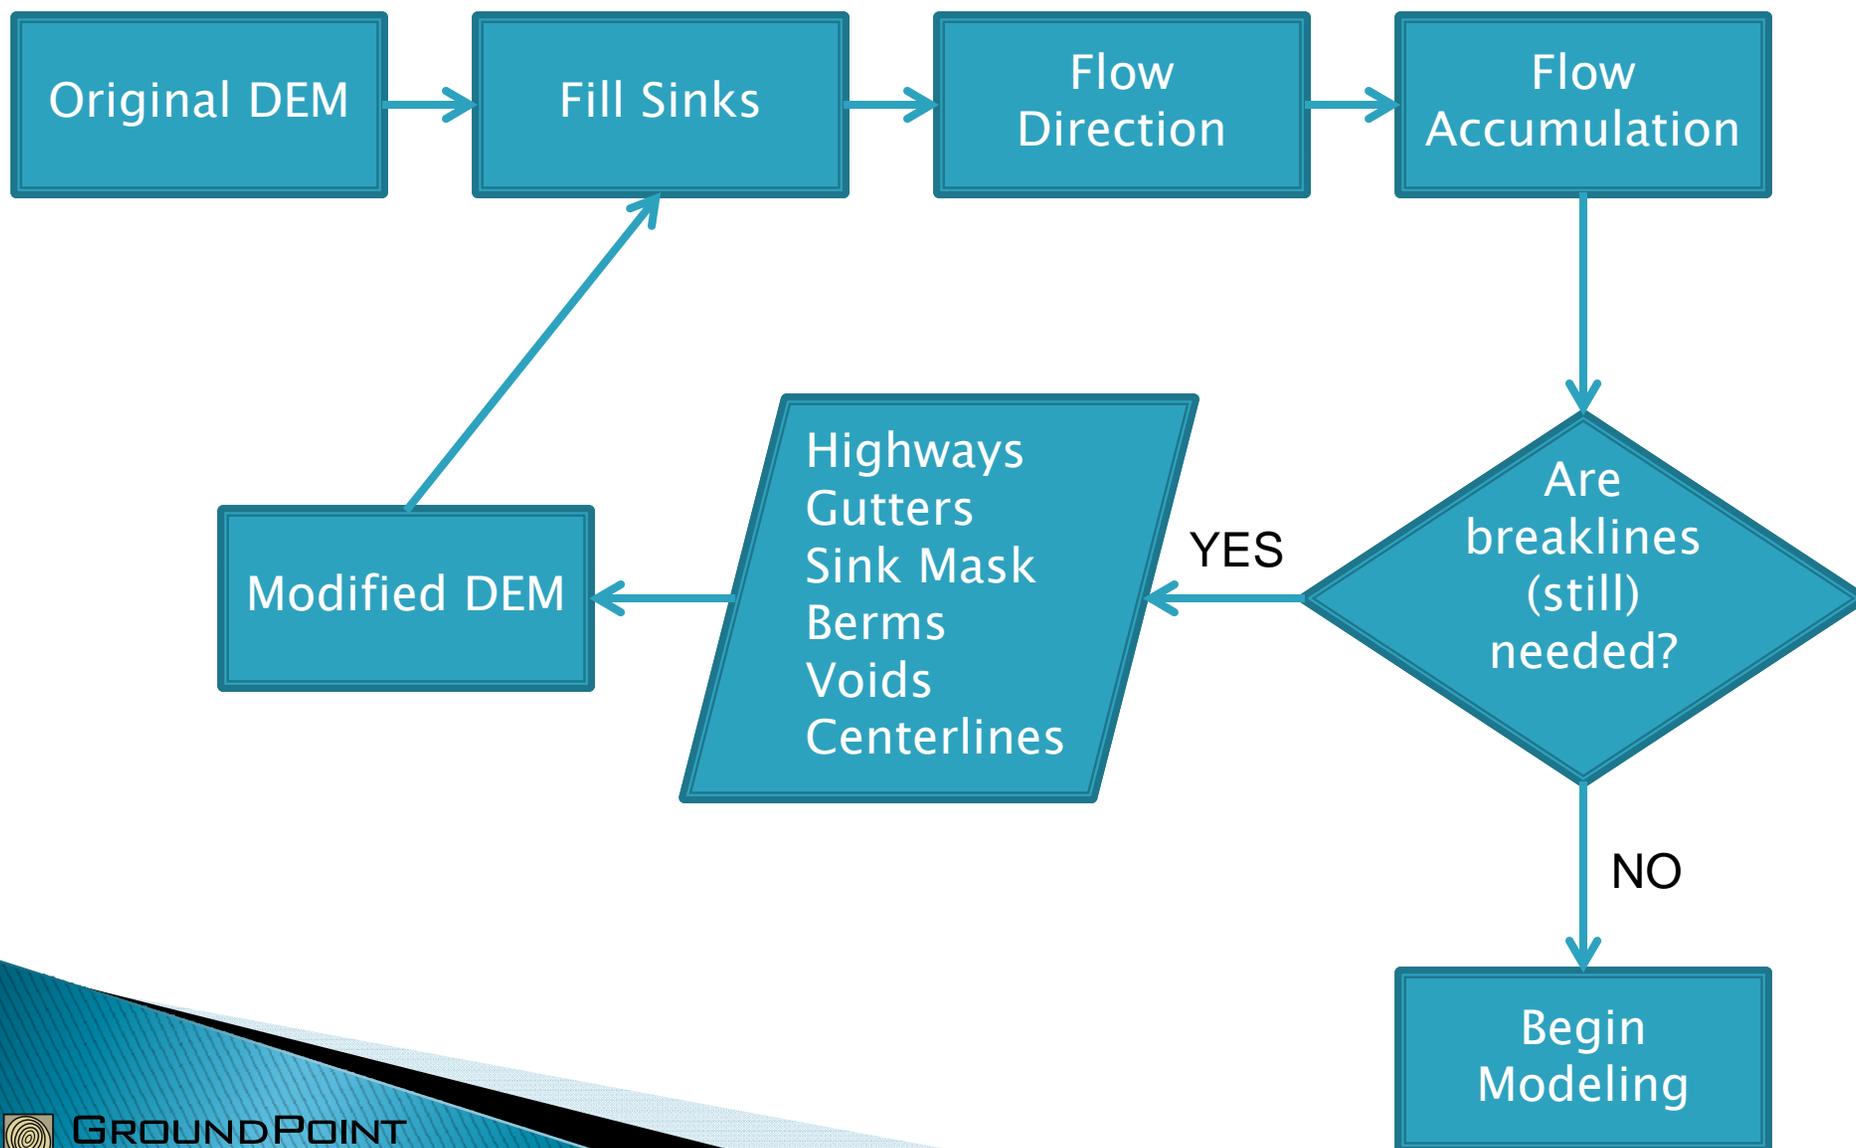

Communities / Hydrology / Surface Water

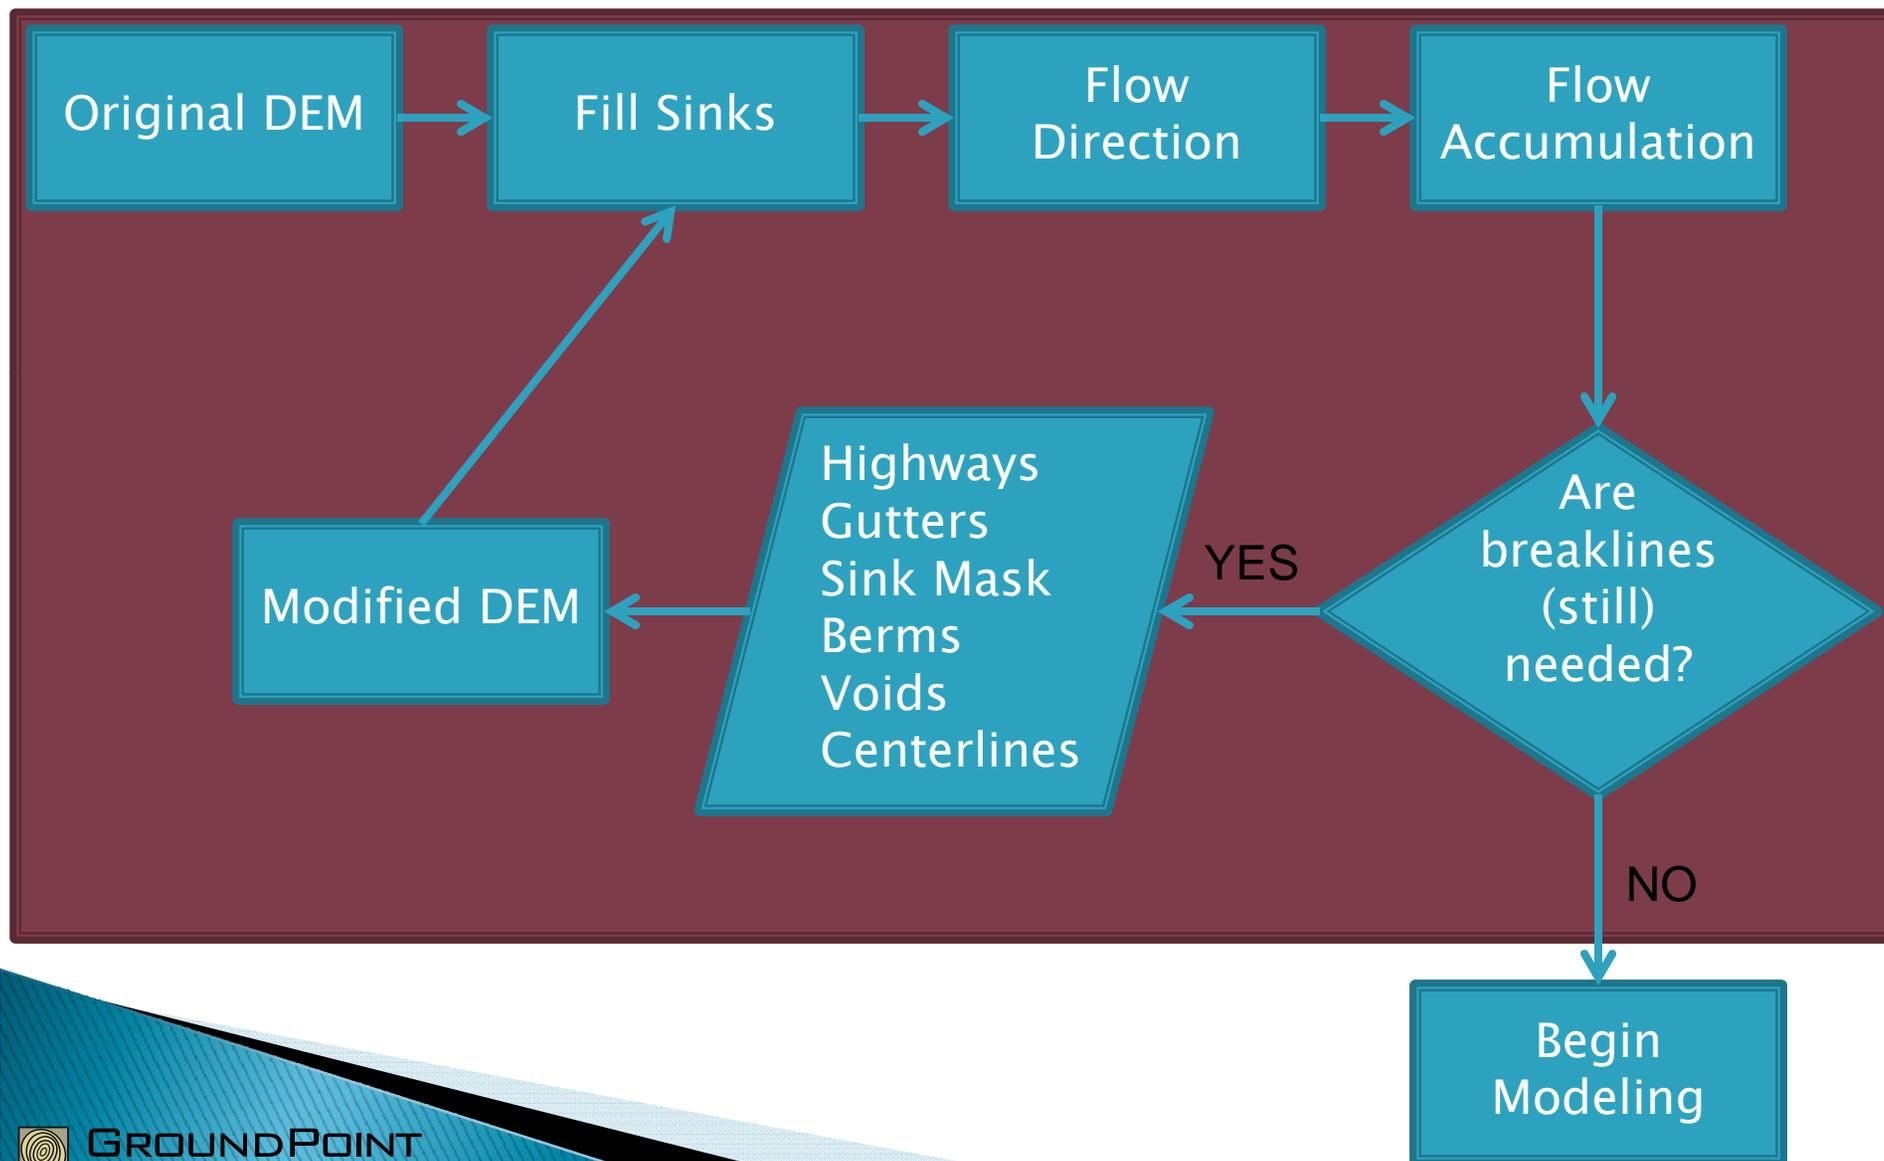

Arc Hydro is a set of data models and tools that operates within ArcGIS to support geospatial and temporal data analyses.

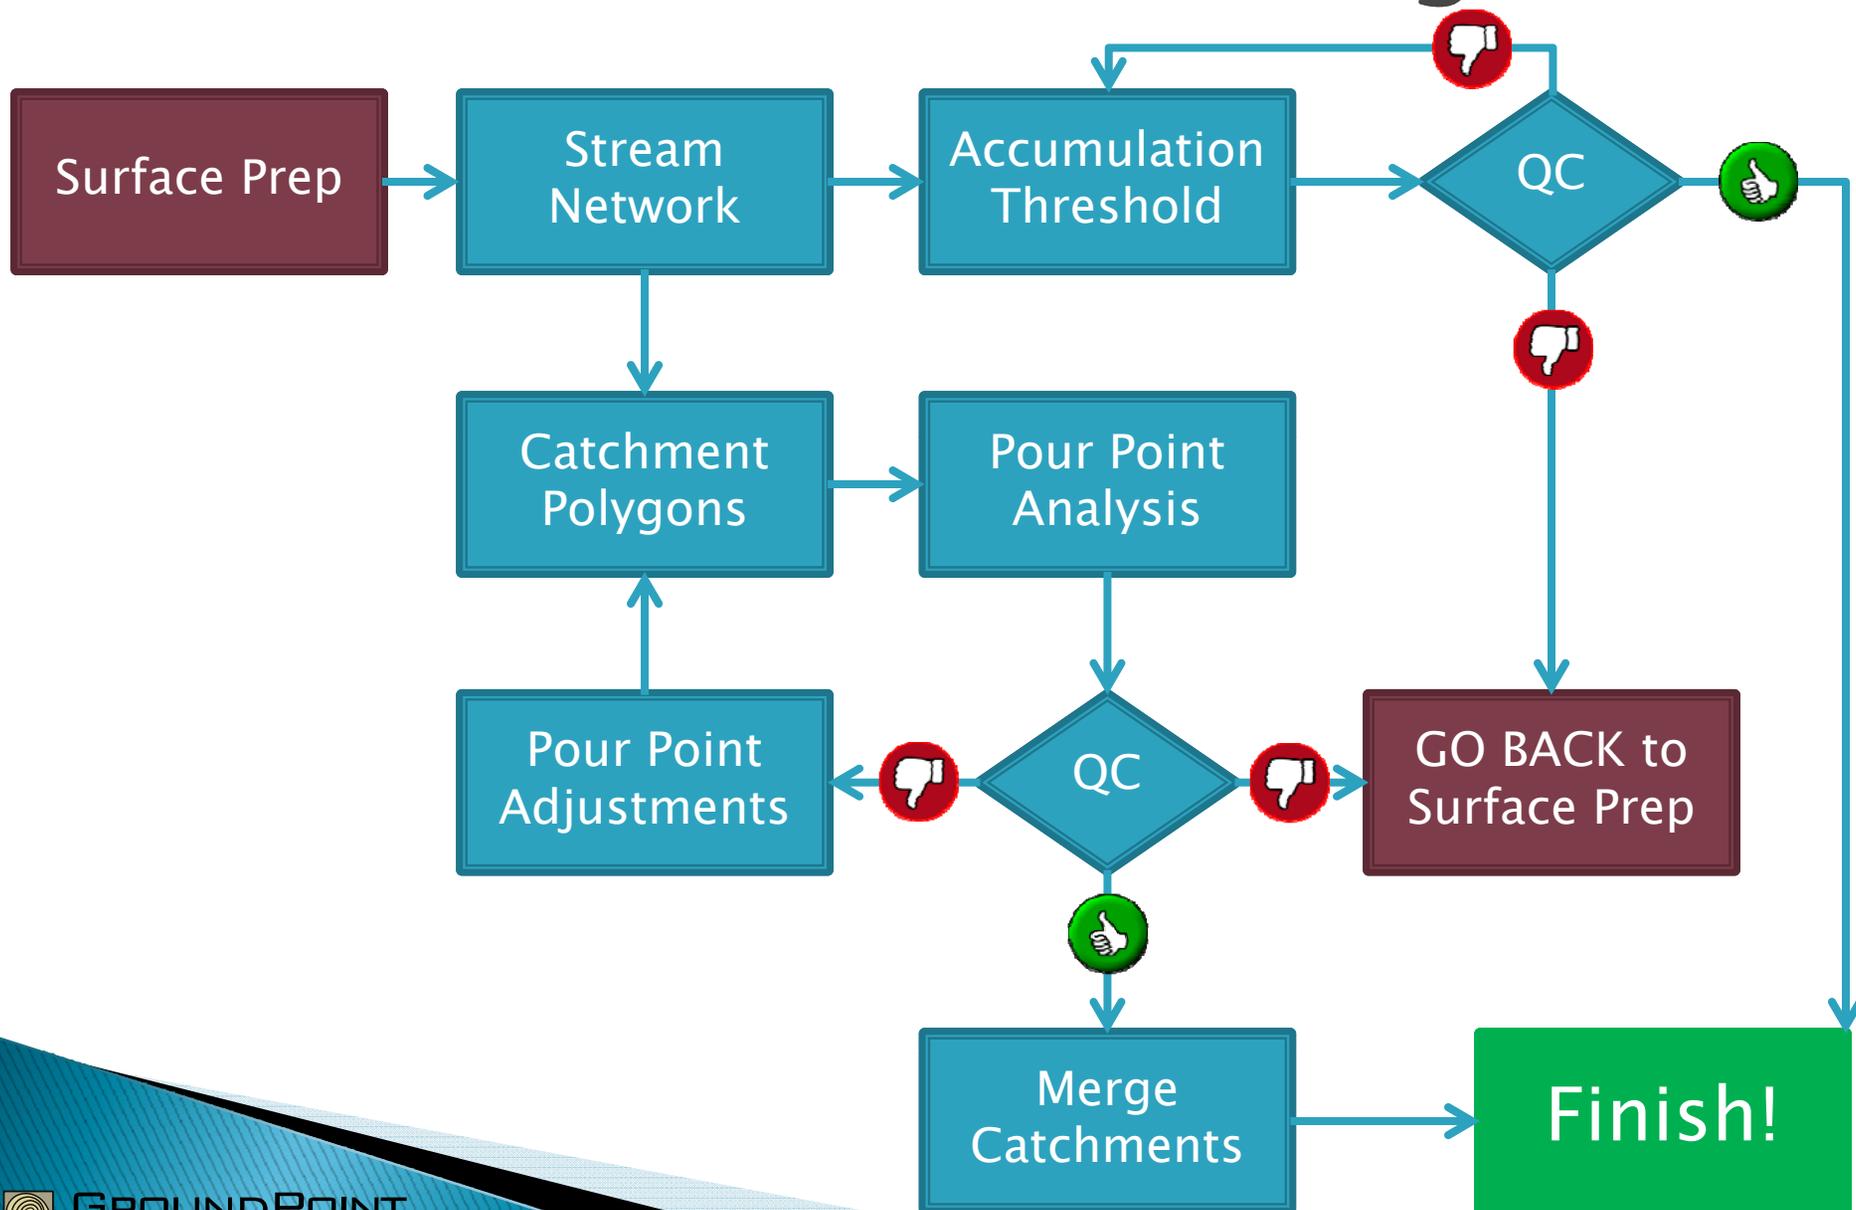

# Workflow- Surface Prep

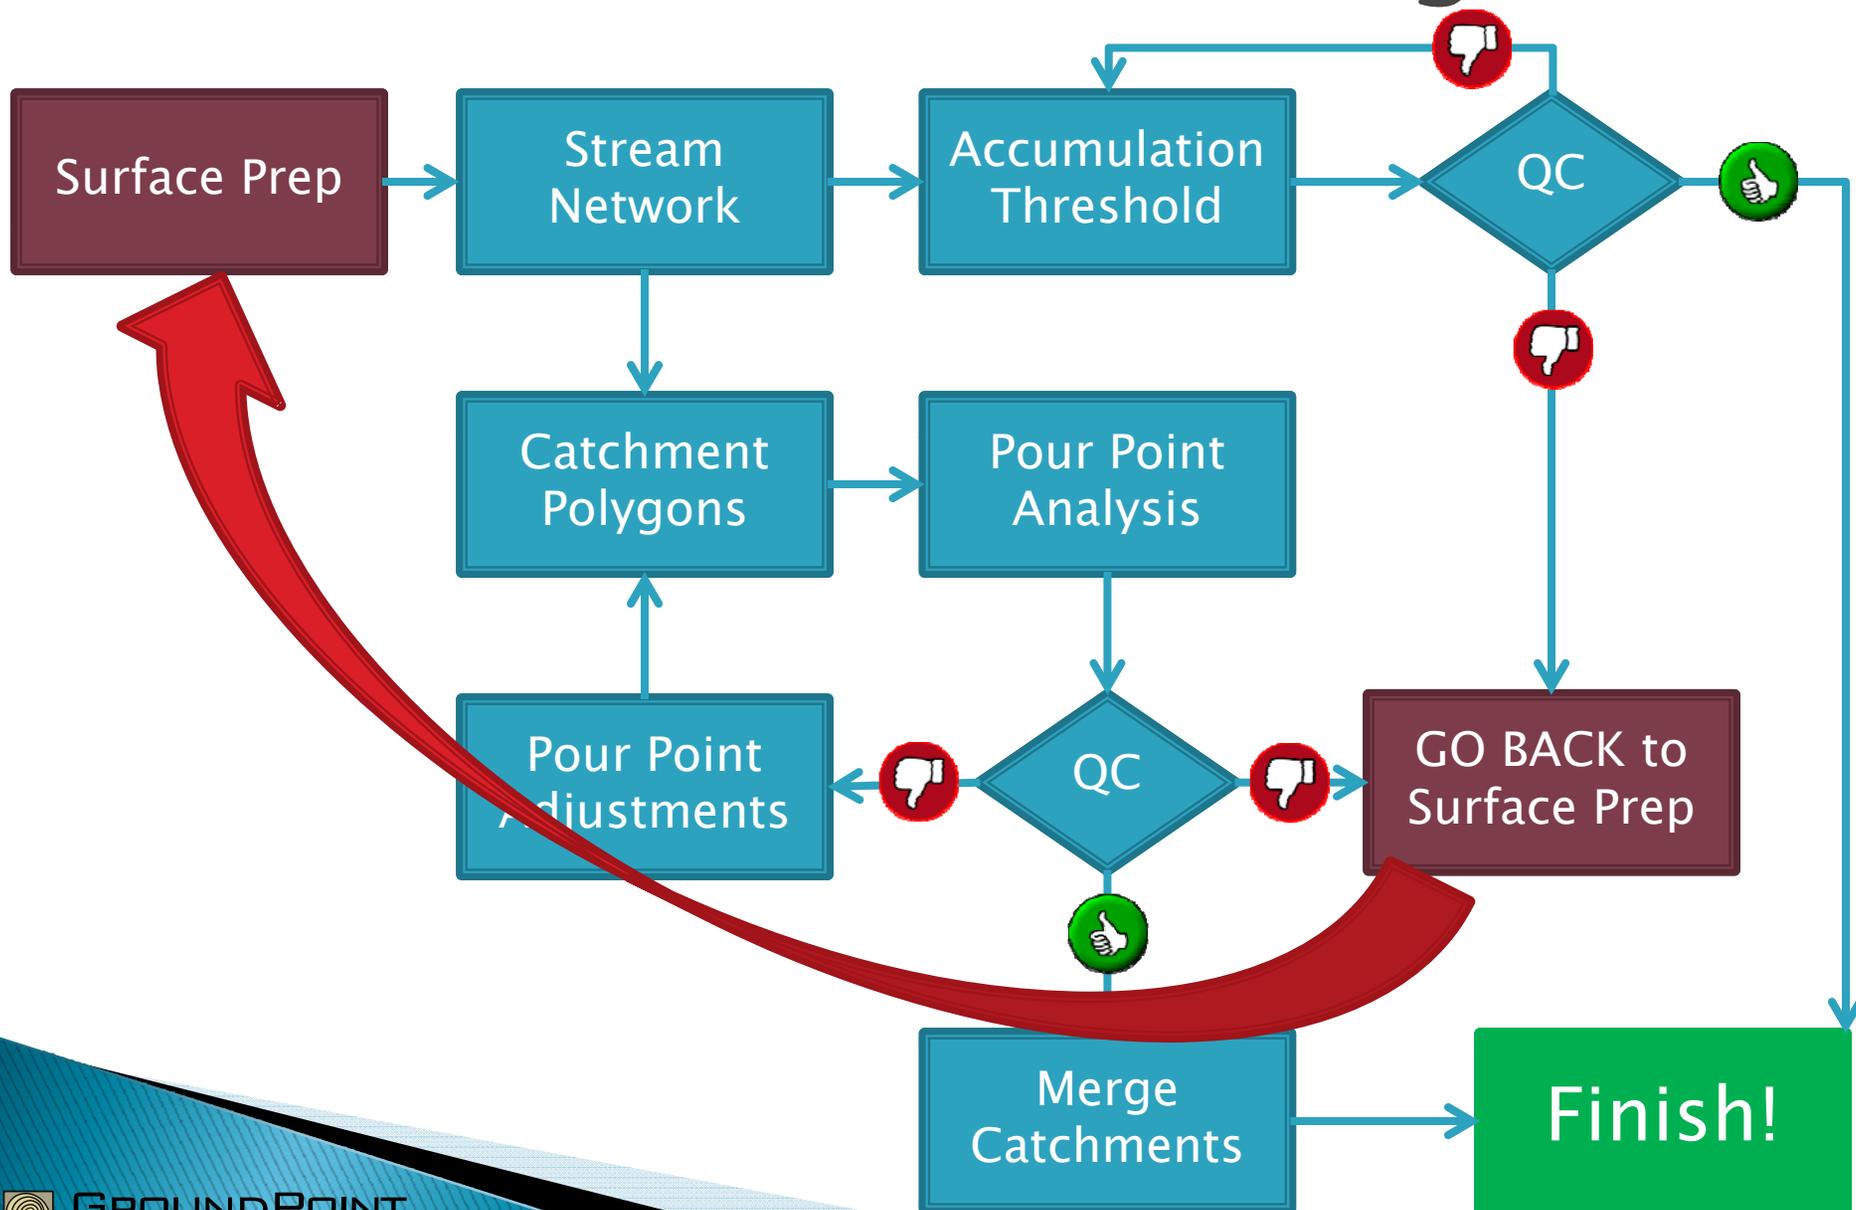

# Workflow- Surface Prep

# Workflow- Modeling

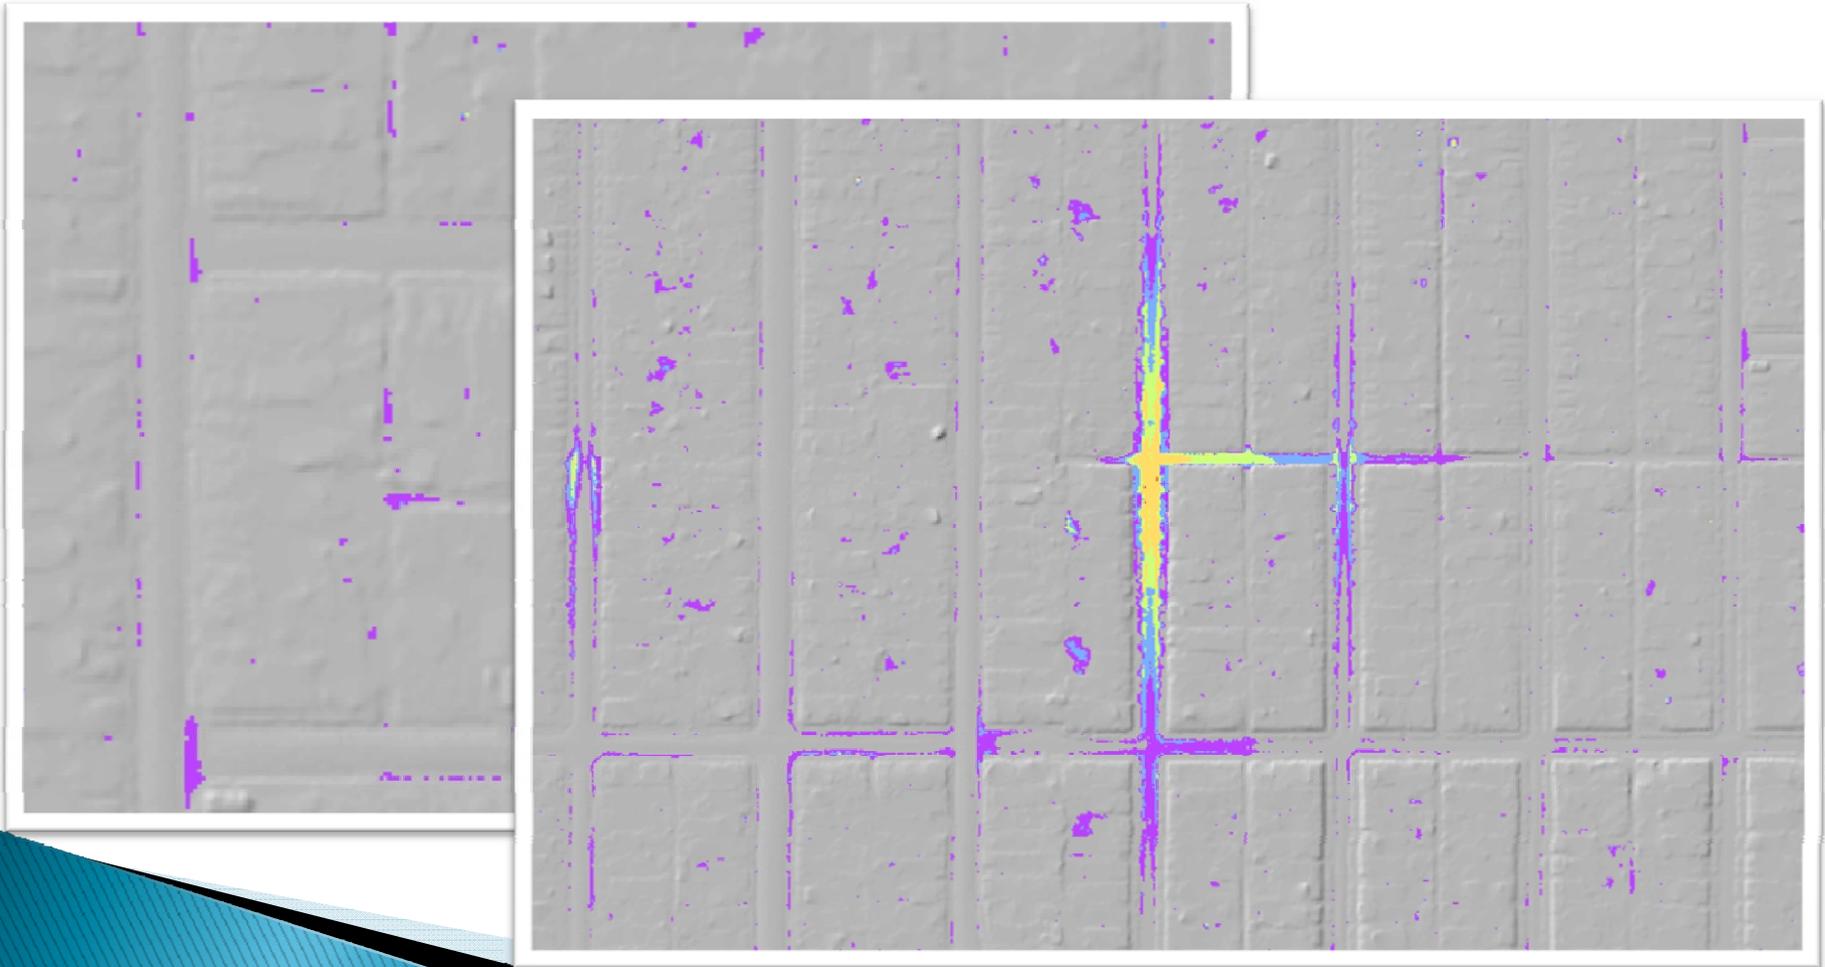

# Workflow- Modeling

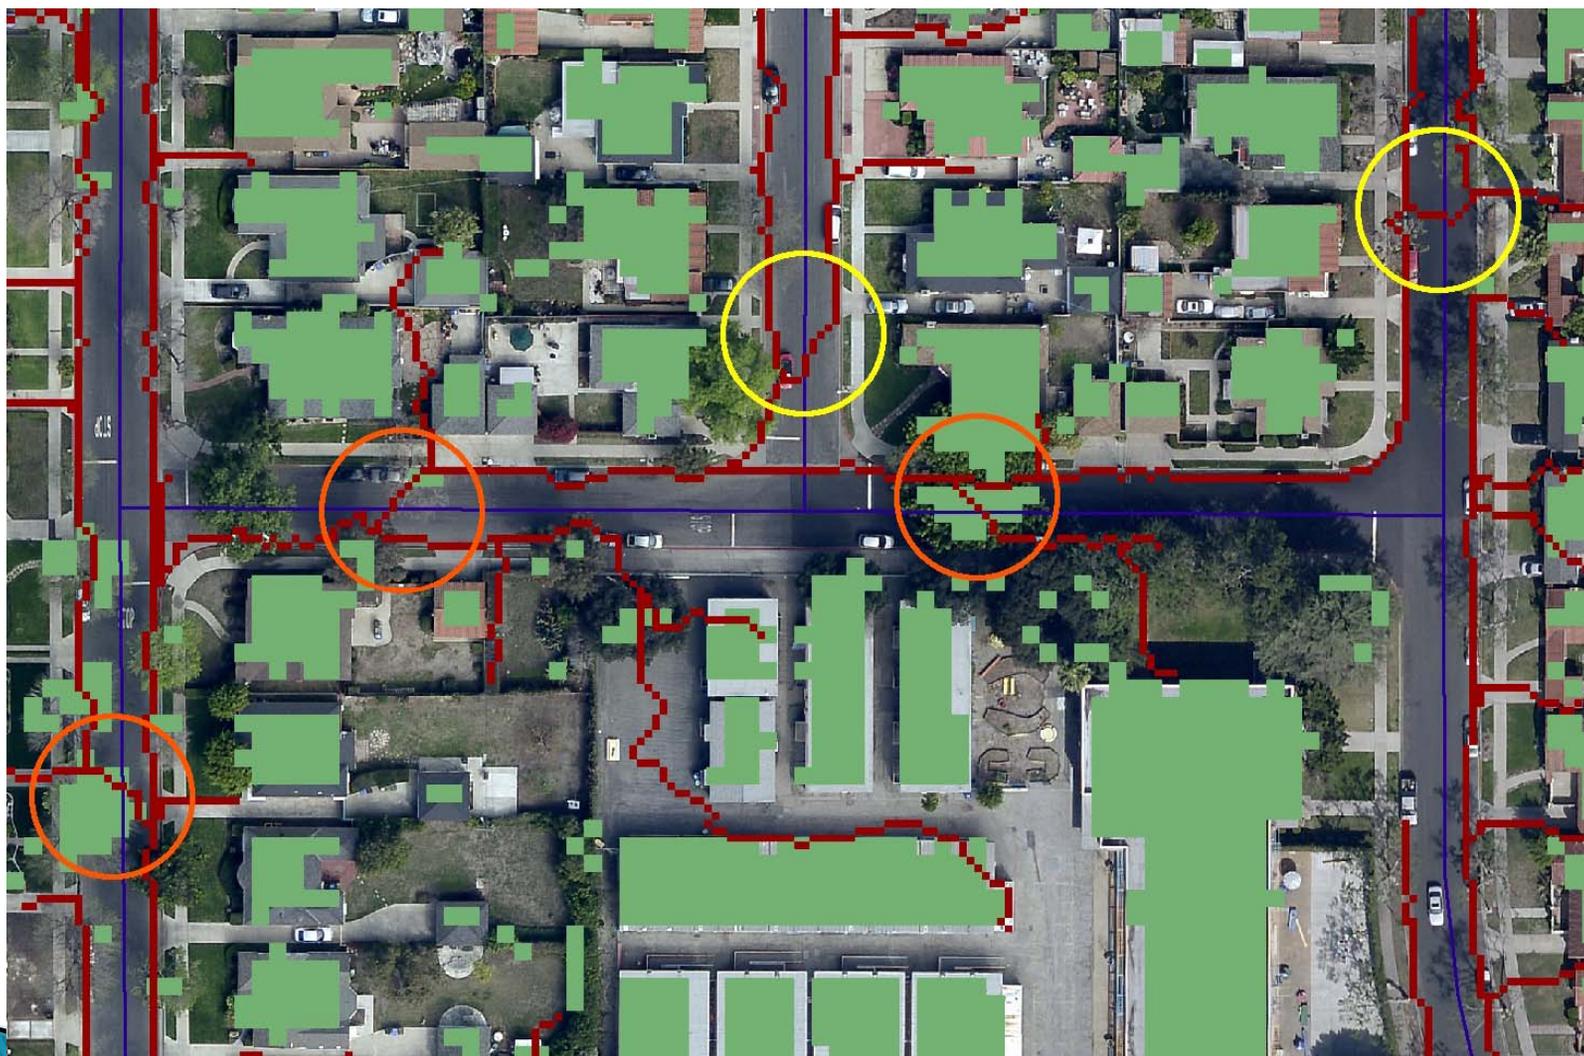

# Workflow- Surface Prep

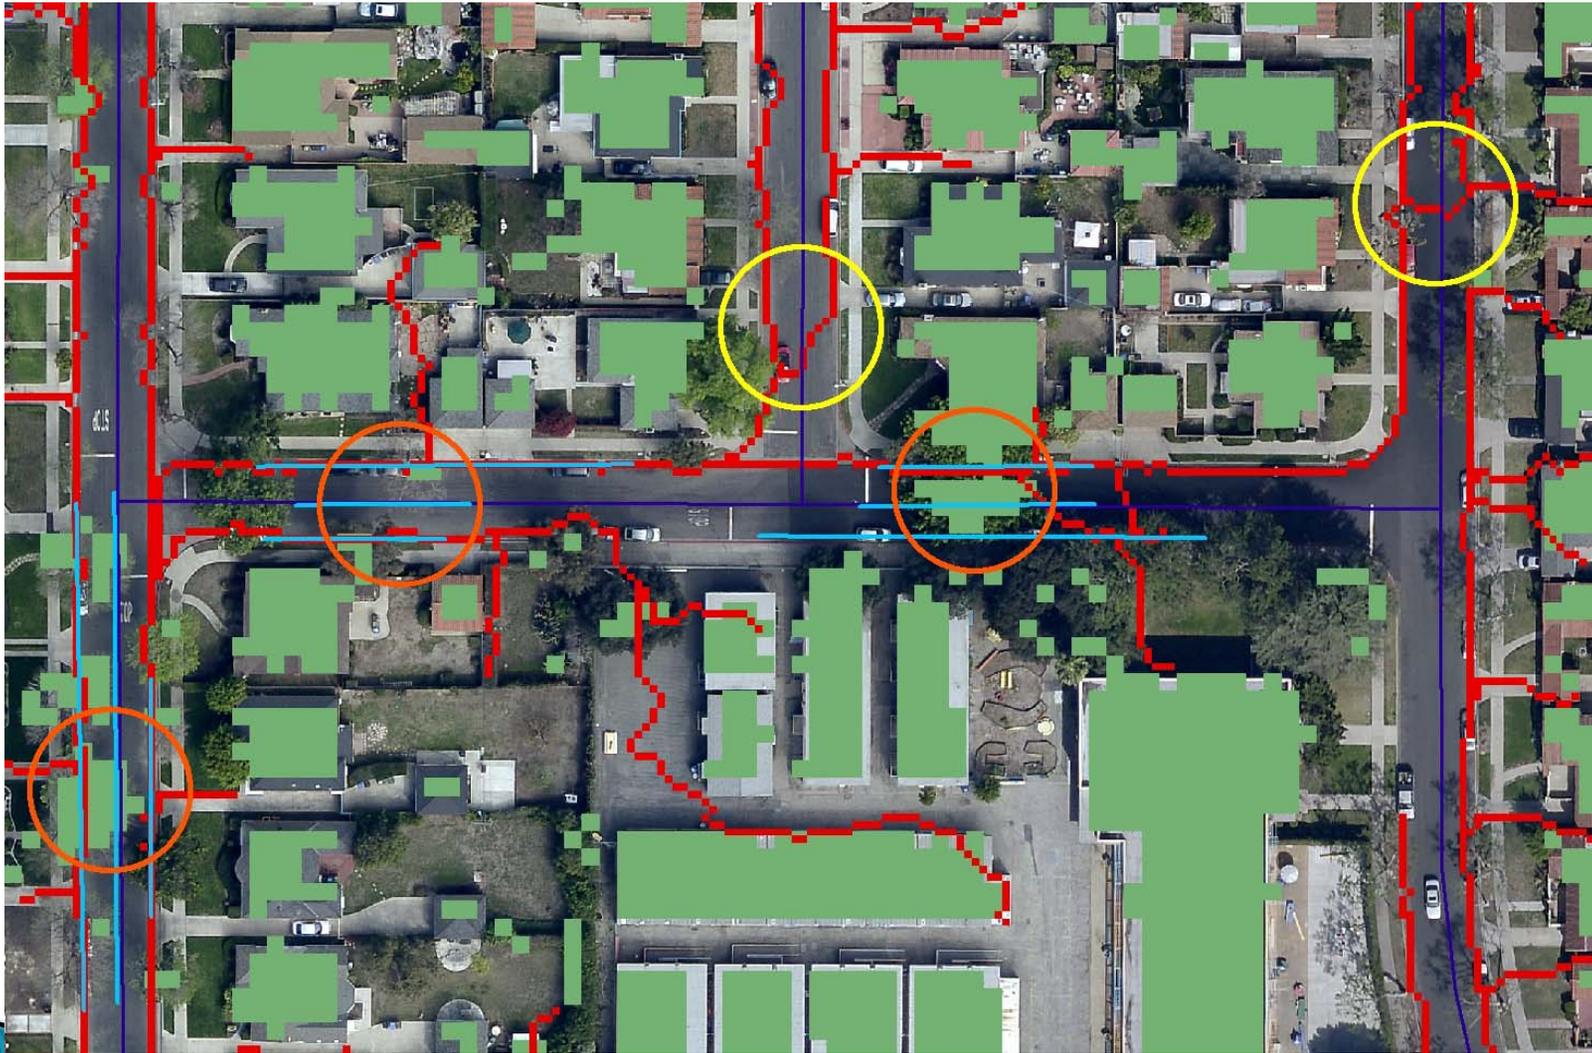

## Fill Sinks

# Workflow- Surface Prep

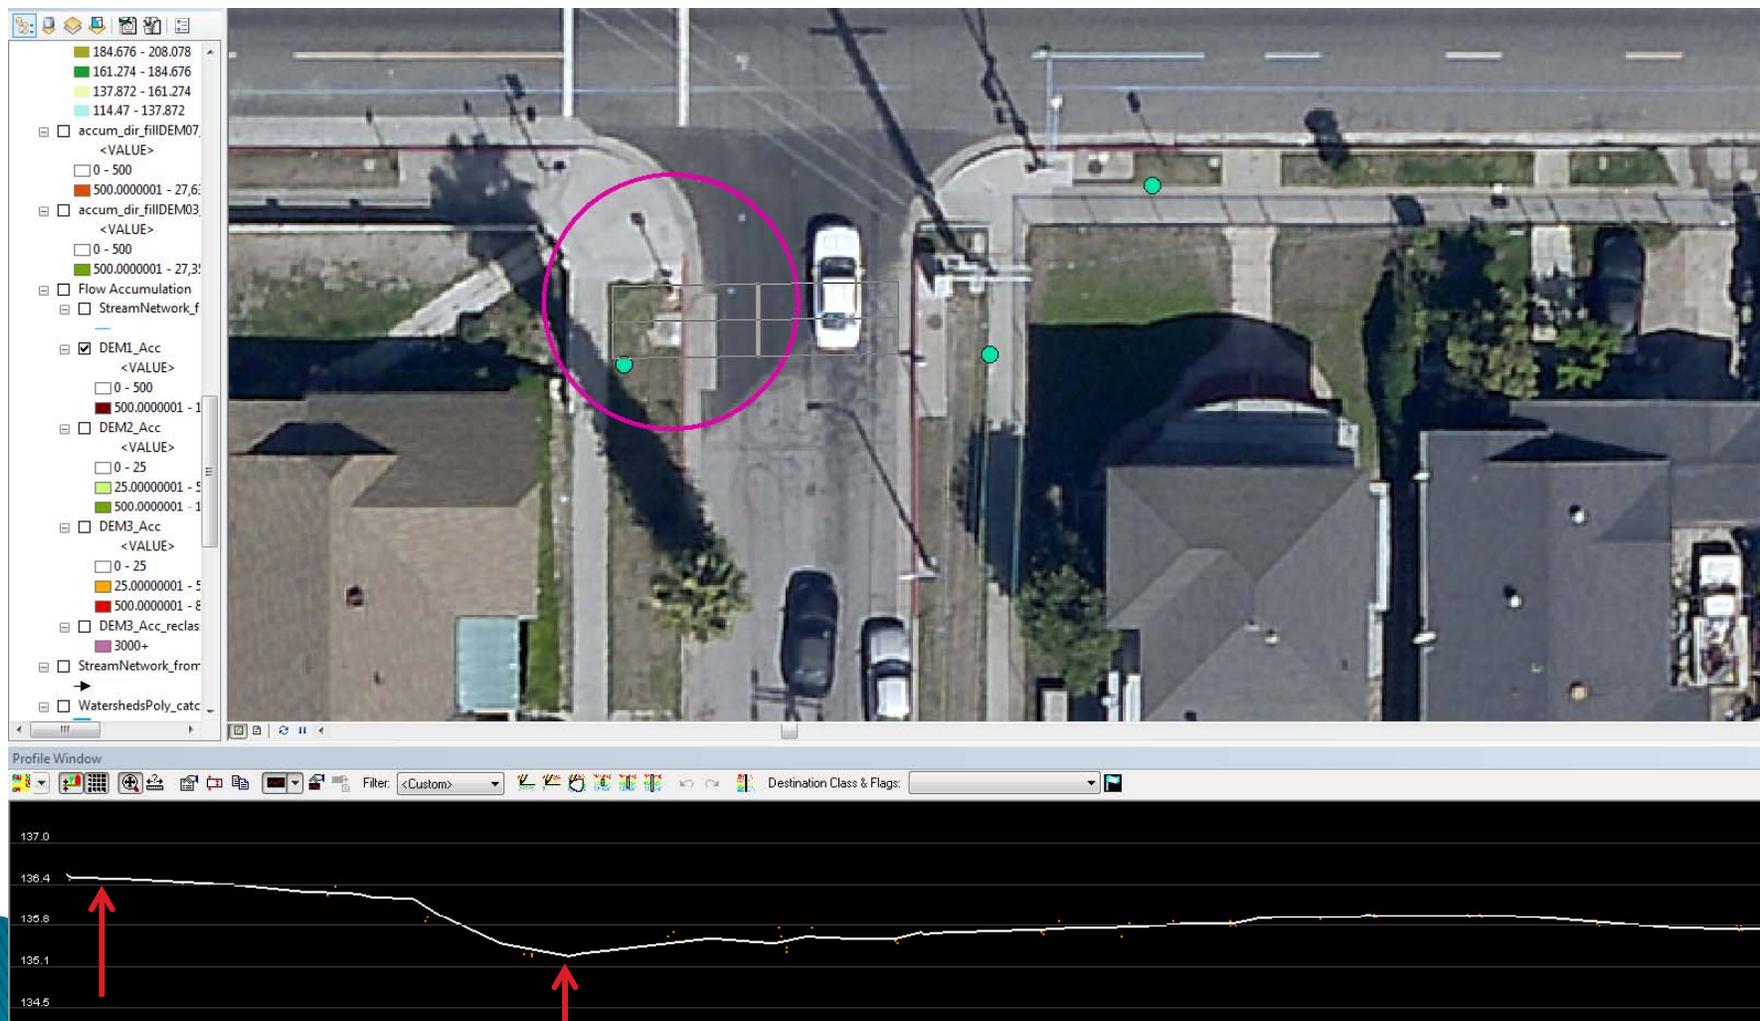

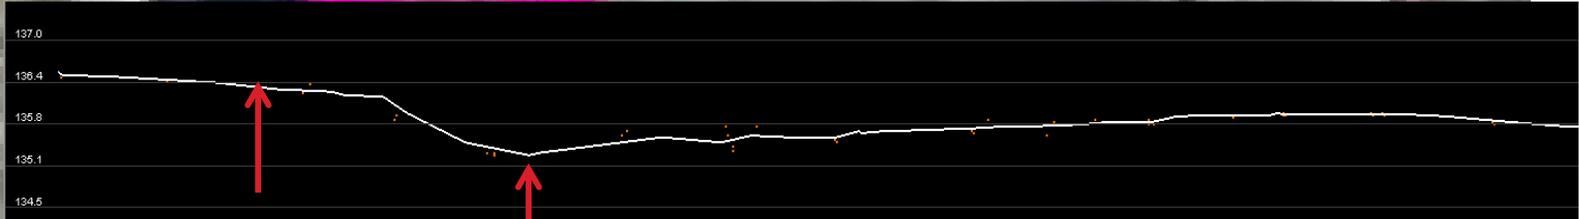

# Workflow- Surface Prep

# Workflow – Modeling

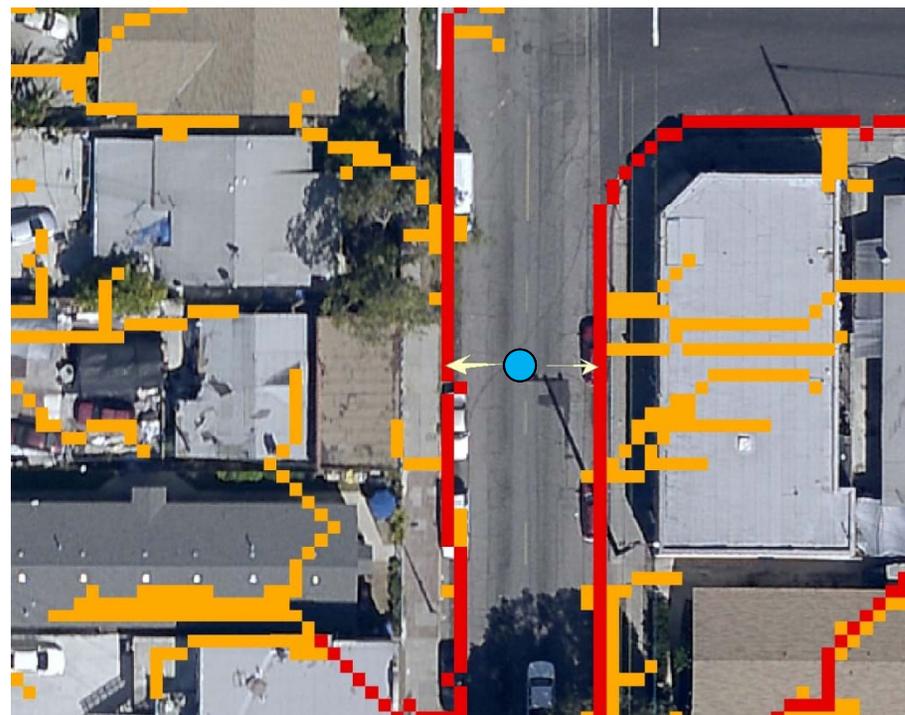

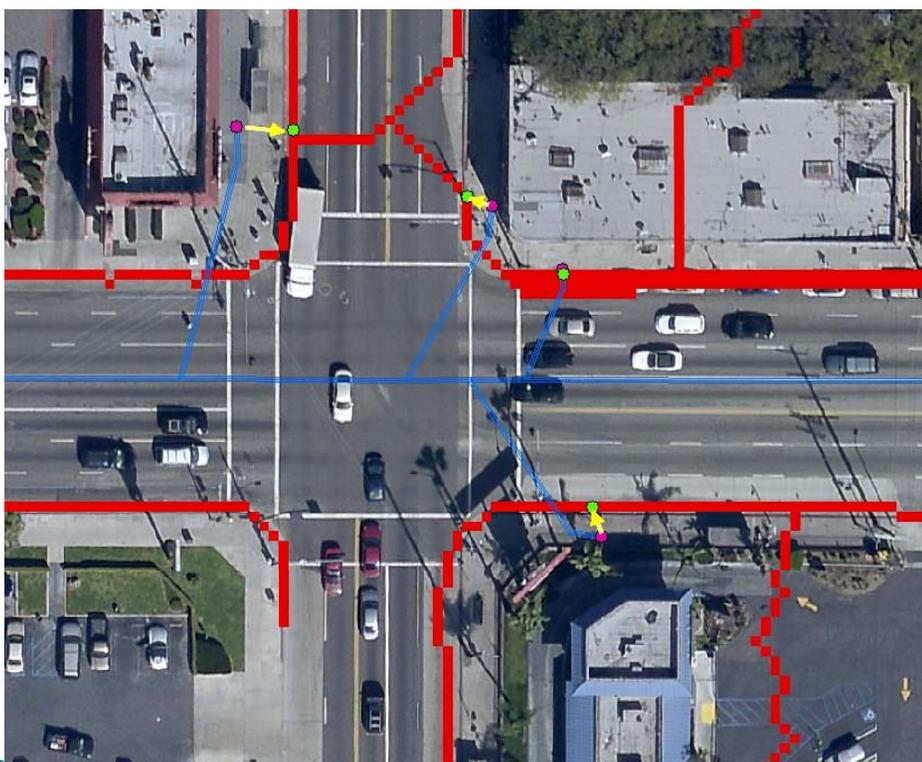

► Pour points must be moved

# Workflow – Modeling

- ▶ Pour points must be moved

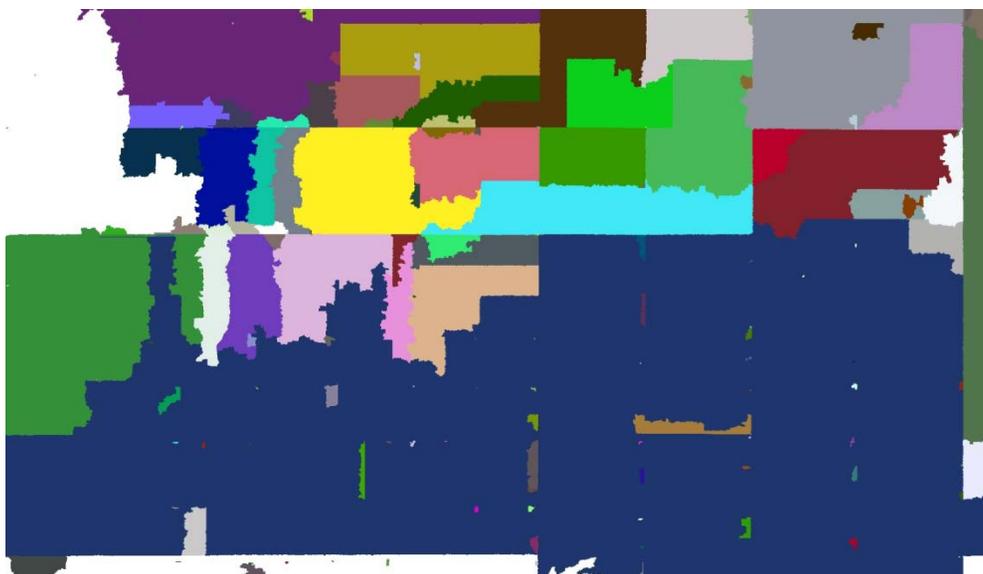

# Workflow – Modeling

- ▶ **Pour Point Locations Matter**
  - Unexpected results
    - Could be a surface issue
    - Could be a Point location issue

# Workflow – Modeling

## Unexpected results

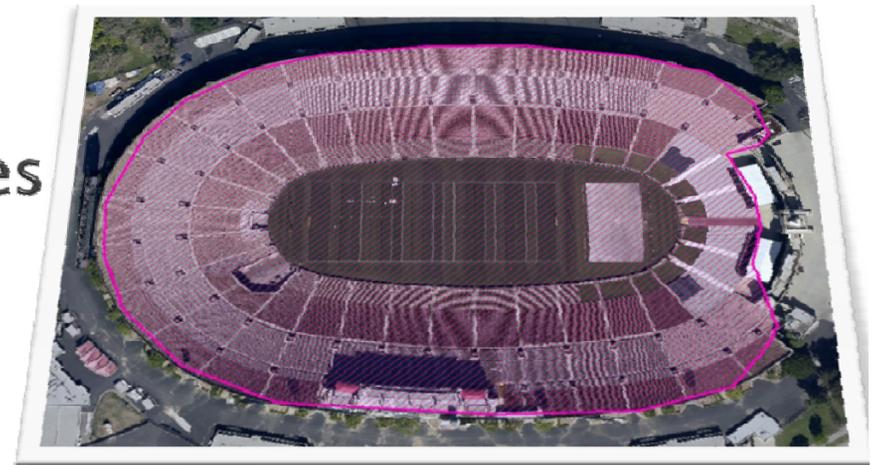

Dark Blue Watershed Too Large – surface prep issue - need a sink mask.

Flow Accum Threshold too low – tiny watershed, surface is correct.

# Lessons Learned

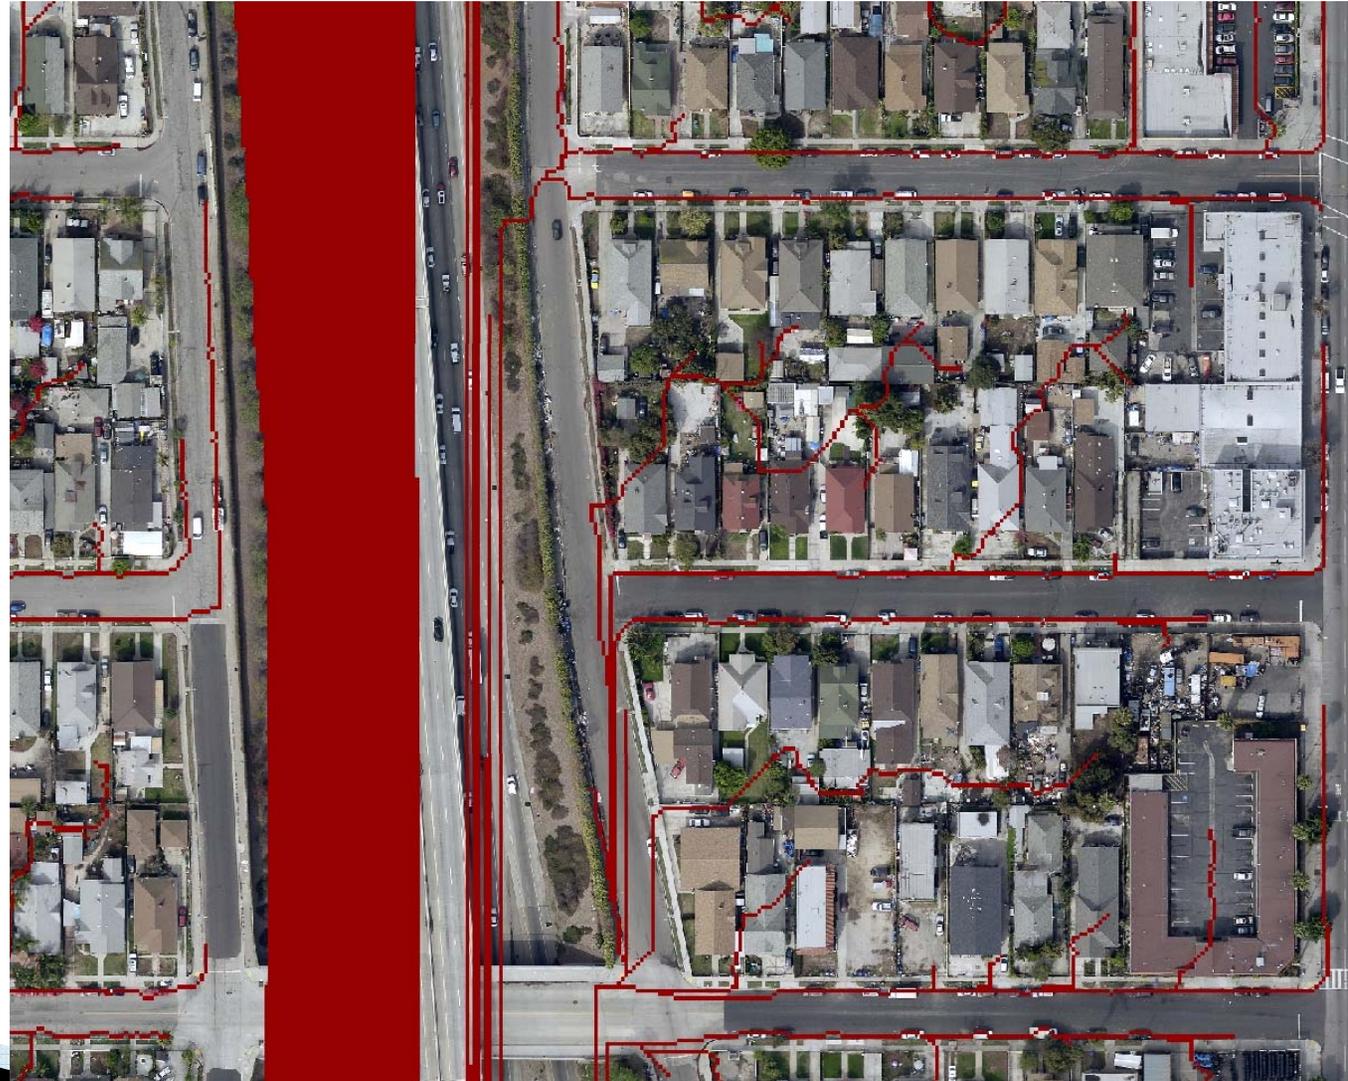

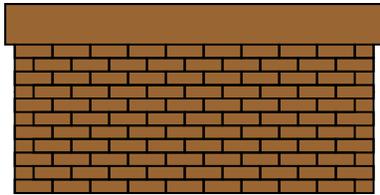

- ▶ You have to Prepare the Surface!
  - Modified DEM
    - Fill sinks
    - Mask areas – don't fill
    - Build Walls– block flow
    - Dig Trenches
      - Culverts
      - Edge of road breaklines

Mask the Stadium so that it doesn't get filled.

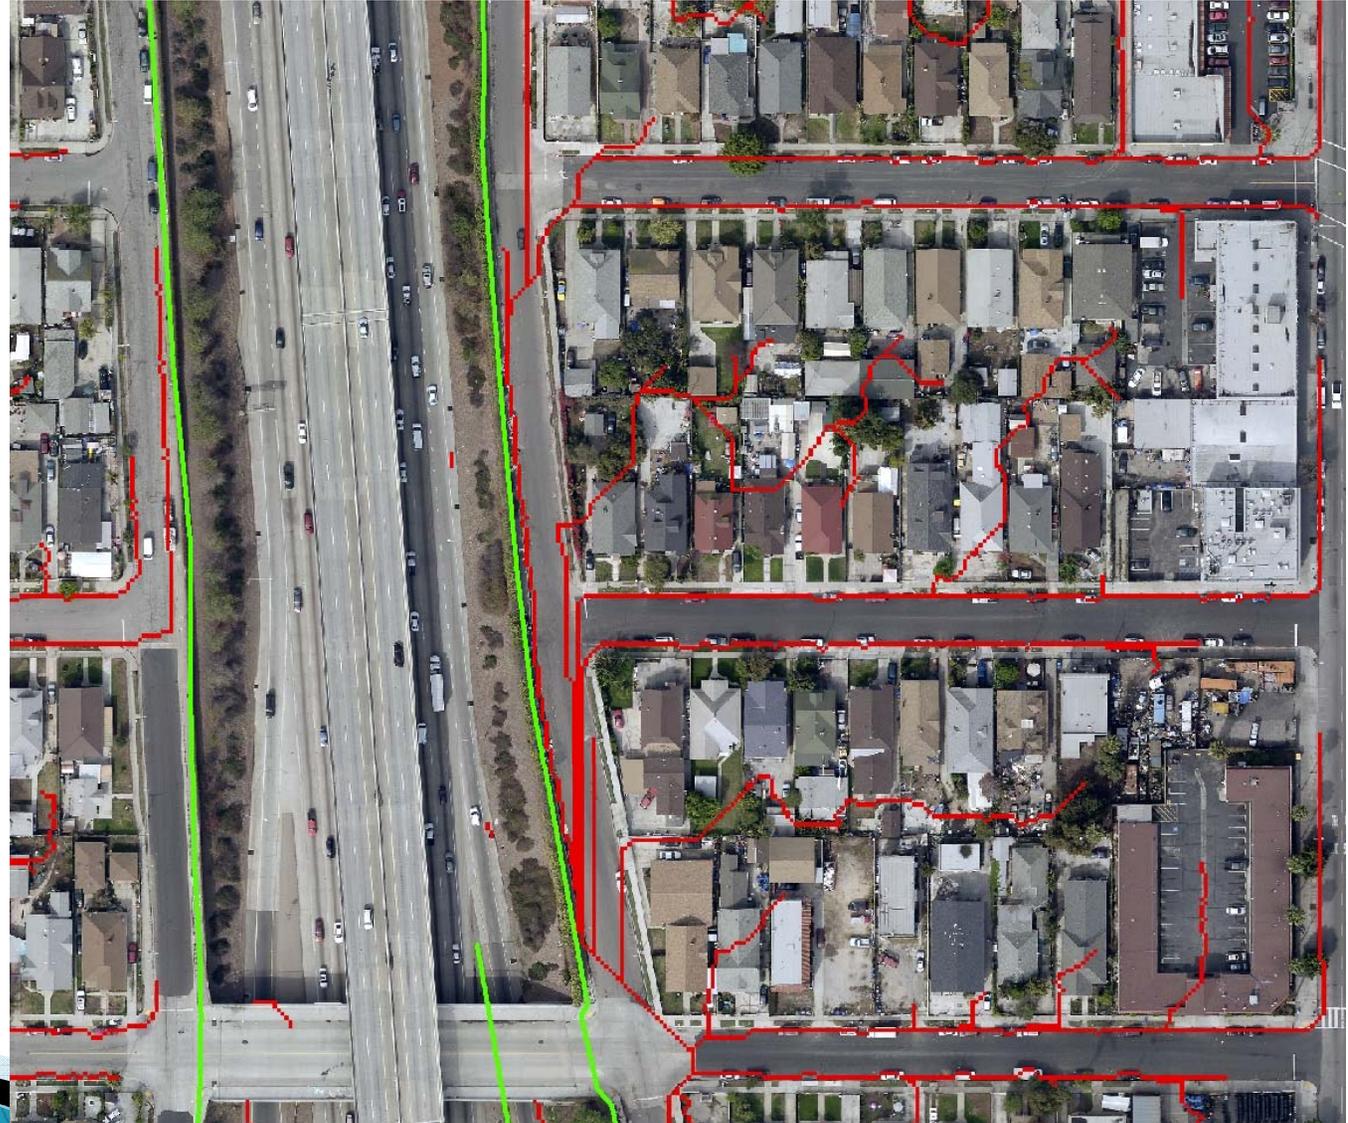

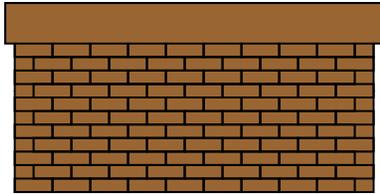

# Lessons Learned

## Build Walls

# Lessons Learned

## Build Walls

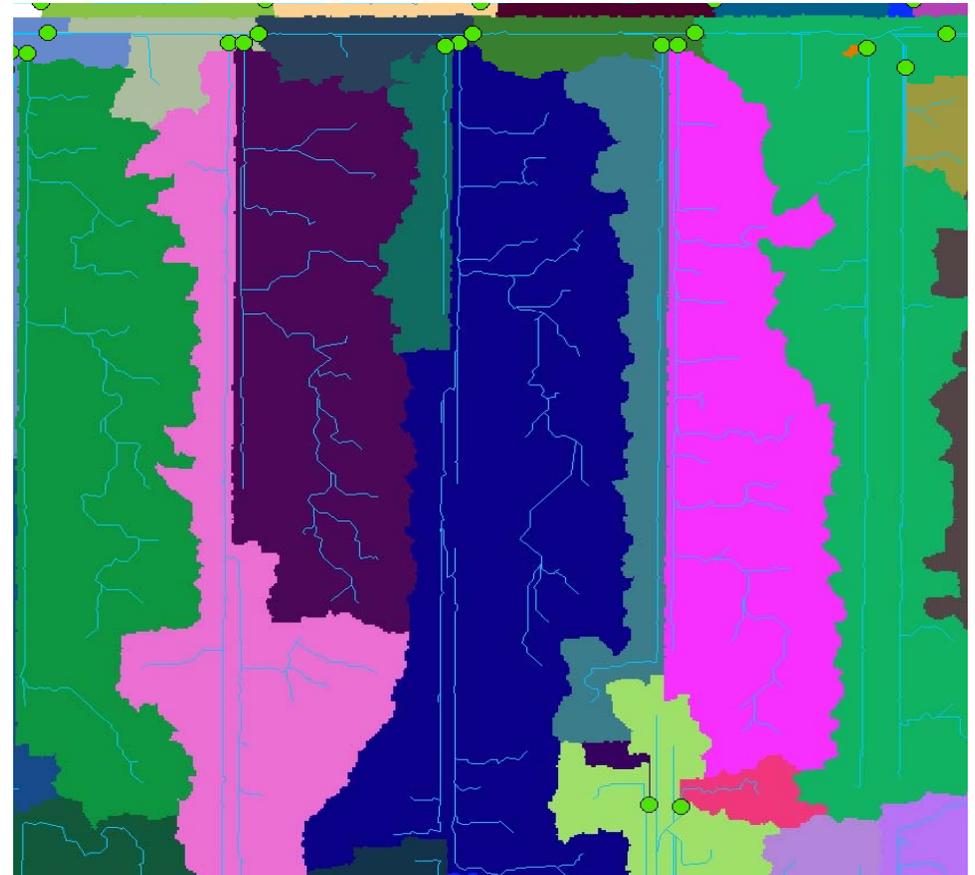

# Lessons Learned

- ▶ **Stakeholder engagement**
  - Get them involved in QC
  - Expectations: goals and priorities
  
- ▶ **Process is iterative**
  - You don't just line it up and hit the "GO" button!
  
- ▶ **Current estimate is this approach may save as much as 70–80% in labor over a manual surveying methodology.**

# Conclusions

- ▶ LiDAR for 1' contours is sufficient
- ▶ ArcGIS still comes out ahead
- ▶ 3 Most Important:
  - Prepare the surface
  - Prepare the surface
  - Prepare the surface
- ▶ Workflow is iterative
  
- ▶ It works
